1. OVERVIEW

Dr. Charis Mesaritakis, Associate Professor, holds a Bachelor's and a Master's degree from the Department of Informatics and Telecommunications and the Department of Physics, respectively, at the National and Kapodistrian University of Athens (NKUA). His Ph.D. thesis, conducted in the Photonics Technology Lab of NKUA's Department of Informatics and Telecommunications, focused on the theoretical and experimental study of mode-locked lasers based on quantum dots for telecommunications and biomedical applications.

He has served as a key researcher in more than 15 European research projects under FP6, FP7, H2020, and Horizon Europe frameworks. In 2013, he received a IEF Marie Curie Fellowship for postdoctoral research at Thales Research Labs (III-V Labs - France), designing pulsed lasers for high-precision telemetry systems. Subsequently, he was awarded two competitive national postdoctoral fellowships from the Giannis Latsis Foundation and HFRI (Hellenic Foundation for Research and Innovation), focusing on photonic and electronic neuromorphic systems for telecommunications and biomedical applications.

Currently, Dr. Mesaritakis serves as the technical manager in two European projects (H2020 NEoteRIC and Horizon PROMETHEUS) dedicated to the development of integrated neuromorphic systems using reconfigurable photonic components and artificial neurons tailored for biomedical applications such as flow cytometry. In 2024, he received an advanced faculty member grant from HFRI to develop neuromorphic systems for physical-layer security applications.

In 2019, he was appointed Associate Professor at the Department of Information and Communication Systems Engineering of the University of the Aegean. In 2025, he joined the Department of Biomedical Engineering at the School of Engineering of the University of West Attica. His teaching portfolio spans a wide range of subjects, including circuit theory, electronic systems, broadband and optical communications, and neuromorphic photonic systems. His research interests focus on designing and experimentally implementing neuromorphic systems for processing biomedical and telecommunication signals and investigating artificial neurons and networks utilizing photonic technology.

Since 2020, Dr. Mesaritakis has been co-founder of the Research Unit on Neuromorphic Computing and Photonics (RNCP) at the University of West Attica. He has authored over 110 peer-reviewed publications in high-impact international journals and conferences on hardware systems for neuromorphic applications, artificial photonic neurons and networks, and quantum dot laser dynamics. He holds two international patents (PCT) on photonic integrated systems for neuromorphic applications and photonic systems for physical-layer security. Dr. Mesaritakis is a reviewer for prestigious journals such as Nature Communications, Nature Photonics, Nature Physics, Communications Engineering, and IEEE, OPTICA, Elsevier, and AIP journals. He has been a member of OPTICA (Optical Society of America) since 2019 and serves as an associate editor for Optics Continuum by OPTICA.
